Joachim Röderer:
Sculpture "Chromman" (2013), steel

€440.00

Product no.: IN-777857

Röderer's art deals with signs and symbols and represents forms that could be taken from molecular biology. Typical of this is the x-like shape of the X chromosome, which is based on the fact that two sister chromosomes are still attached at one point during cell division. Based on their molecular biological shape, which is only visible under the microscope, Röderer developed three-dimensional steel sculptures magnified millions of times.

Sculpture made of Corten steel 2013, edition of 10 copies, numbered and monogrammed. Height 22.5 cm, width 11 cm, depth 1.5 cm.
