

## Garden sculpture "Long-Eared Owl" (version with column)

**€690.00**

**Product no.: IN-748677**

The plumage of the long-eared owl is perfectly adapted to its habitat. At night, it searches for prey in the deep forest as a silent and almost invisible hunter. And during the day, it sits on a branch - often nestled close to the trunk - its plumage can hardly be distinguished from the background. As a bronze sculpture, on the other hand, it presents itself in all its beauty and splendour - perched on a tree trunk or a high natural stone column.

Bronze sculpture "Long-eared Owl" with stone column: size (owl) approx. 10 x 25 x 10 cm (w/h/d), weight 1 kg. Column height approx. 40-45 cm. Weight approx. 70 kg. Each column is a unique piece
