

Christiane Wendt: "Ring Sundial Necklace"

€398.00

Product no.: IN-698632

In 1436, the Franconian scientist Johannes Müller, alias "Regiomontanus", designed his famous portable ring sundial, with which the solar time can be read in any place on earth. This decorative object faithfully reproduces the historical model and is fully functional at the same time: Set the hole in the inner ring to the current month, hold it towards the sun and add 1 hour during daylight saving time! Gold-plated 925 sterling silver, with 24-carat gold plating, with set garnet. Diameter 2 cm, on 45 cm cable chain necklace.
