

Sculpture "Nebra Sky Disk" (reduction)

€490.00

Product no.: IN-794980

The Nebra Sky Disk was declared a World Documentary Heritage of Humanity by the UN in 2013. That is not a tribute to the age of the object but, above all, to its importance in the history of science and thus to the observational skills of the Bronze Age astronomers who made the sky disc possible in the first place. And that, without a doubt, was only possible through precise and patient observation and analysis of the starry sky above Nebra. Characteristics of scientific activity that are still valid hundreds of generations after them. Like this replica of the original, one-third the size, standing on a marble pedestal.

Metal disc, copper-plated and patinated. Diameter approx. 12.5 cm. Pedestal of diabase, size of the pedestal 6 x 6 x 6 cm (w/h/d). Total size approx. 12.5 x 18.5 x 6 cm (w/h/d).
