

Petrified Crocodile (Crocodylus Robustus)

€490.00

Product no.: IN-399553

Stone witnesses of prehistoric times: At the time of the first flowering plants, when life began to soar, organisms in the vast lagoons of the Jurassic Sea were transformed into minerals, into naturally created works of art and stone witnesses of former communities of life. Their study provided the basis for evolutionary research. Our true to the original replicas of famous and unique fossils provide deep insights into the life of the prehistoric world.

This fossil with strong skin armour beautifully shows that crocodiles have hardly changed since the Jurassic period. Their characteristics - long body, short legs, flattened skulls and sharp teeth set in strong jaws perfect for slow sneaking and quick grasping of prey. Upper Jurassic Kimmeridgian; age approx. 150-140 million years. Place of discovery: Cerin, Department Ain/Eastern France. Original: Private collection, limestone.

True-to-life replica in stone mass, patinated. Size 47 x 25 cm.
